8/2000 to 10/2005	Web Programmer/Analyst	KCI Technologies, Inc.	Hunt Valley, MD

A Strong Addition to Your Team

- **Extensive development experience** in C#, MVC, ASP.NET, Windows Forms and Windows Services in .NET using Linq and Entity Framework. Recent experience in building and deployment AWS micro-services and APIs with Python and NodeJS. Familiar with jQuery, SASS, PHP and development in content management frameworks including Wordpress, Sitecore, and Django.
- **Database design and administration** skills include initial database design, stored procedure programming, change management, secure configurations and incremental deployments in Microsoft SQL Server. Familiar with SOC, HIPAA, PCI, GDPR, and CCPA compliance guidelines for data storage and retention. Experience in AWS DynamoDB, MySQL and PostgreSQL.
- **Strong technical writing** skills to produce thorough and useful bug reports, succinct status reports, comprehensive documentation, and well-commented code. Rob creates thorough system requirements specifications and software design documents to deliver high-quality products with client support.
- **Systems and network infrastructure** experience including installation, maintenance and configuration of physically hosted and cloud-based servers on Amazon EC2 for production web sites including CloudFront, AWS Lambda micro-services, and API Gateway management. Deploys and maintains critical applications and web properties with equal facility in Windows Server and Linux.
- **Process and delivery driven** with experience implementing and deploying development workflows in Atlassian JIRA to guide issues from user stories and requirements to final testing and deployment. Substantial experience in use and management of source repositories in Git, Subversion, and automated builds and deployments using Jenkins and Visual Studio Team Services.
